(54) Image input apparatus with means for varying and indicating the orientation of a camera head

(57) This invention provides an image input apparatus which allows easy positioning between an original and a camera head and can improve operability in a document photographing mode. An image signal obtained by an image pickup unit is input to the apparatus main body, and the signal processing of the input signal is performed. The apparatus has a camera head arranged at the distal end side of columns coupled via a plurality of joint portions, a signal processing unit incorporated in a base of the apparatus main body that supports the proximal end side of the columns, and a cable which is arranged along the columns and connects the camera head and the signal processing unit. When an image signal is input from the camera head to the signal processing unit, the optical axis direction of the camera head and its angle about the optical axis are adjustable via the joint portions. When the angles defined between the joint portions are set to be 90°, the input image size can be set to be A4 size. The camera head has a lens portion which allows a rotation operation, and an index that can indicate its rotation operation state is arranged at an appropriate position on the outer surface of the lens portion. The column is supported by the base via a third joint portion, a bottom plate and a weight are electrically connected to each other, and a signal processing circuit board is arranged between the bottom plate and the weight. An index indicating the direction of the camera head with respect to the base is arranged at least at

the center of the front surface of the base. The apparatus is arranged so that the route of the cable does not interfere with the pivot axes of the respective joint portions when the cable is laid.

CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

- ☐ Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):
- ☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

- ☒ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.
- ☐ As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.
- ☐ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:
- ☐ None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

LACK OF UNITY OF INVENTION
SHEET B

Application Number
EP 96 30 4398

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claim : 1 to 8

An image input apparatus having a camera head pivotably mounted on columns coupled via joint portions and pivotably supported by a base with a signal processing unit

- with an adjustable optical axis of the camera via the joint portions of the columns.

2. Claim : 9 to 13

An image input apparatus having a camera head pivotably mounted on columns coupled via joint portions and pivotably supported by a base with a signal processing unit

- with a rotatable lens of the camera having an index for the rotation.

3. Claim : 14 to 16

An image input apparatus having a camera head pivotably mounted on columns coupled via joint portions and pivotably supported by a base with a signal processing unit

- with a particular construction of the base having a metal plate and housing the signal processing unit.

4. Claim : 17 to 20

An image input apparatus having a camera head pivotably mounted on columns coupled via joint portions and pivotably supported by a base with a signal processing unit

- with a directional index located at the base.

5. Claims: 21 to 23, 24 to 26

claims 21 to 23: An image input apparatus having a camera head pivotably mounted on columns coupled via joint portions pivotably supported by a base with a signal processing unit

- with a particular routing of the cable to avoid interference with the pivot axes.

Claims 24 to 26: An apparatus connecting two members via columns coupled via joint portions and a cable

- with a particular routing of the cable to avoid

**LACK OF UNITY OF INVENTION
SHEET B**

Application Number
EP 96 30 4398

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

interference with the pivot axes.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 96 30 4398

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
